

PERSONAL PORTFOLIO WEBSITE
AI23431- WEBTECHNOLOGY AND MOBILE

APPLICATION PROJECT REPORT

SUBMITTED BY
- HARSHINI.R(241501068)

in partial fulfillment for the award of the degree of

BACHELOR OF TECHNOLOGY

in

ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

**DEPARTMENT OF ARTIFICIAL INTELLIGENCE
AND MACHINE LEARNING
RAJALAKSHMI ENGINEERING COLLEGE
(AUTONOMOUS),**

APRIL-2026

RAJALAKSHMI ENGINEERING COLLEGE

(an Autonomous Institution Affiliated to Anna University, Chennai)

BONAFIDE CERTIFICATE

Certified that this Project Thesis titled “PERSONAL PORTFOLIO WEBSITE” is the Bonafide work of HARSHINI R(2116241501068) who carried out the work under my supervision. Certified further that to the best of my knowledge the work reported here in does not form part of any other thesis or dissertation on the basis of which a degree or award was conferred on an earlier occasion on this or any other candidate.

Mrs.B.Durga Devi

Assistant Professor (SG),

**Department of Artificial Intelligence
and Machine Learning,**

Rajalakshmi Engineering College,

Chennai - 602105

Submitted to Project Viva-Voce Examination held on _____

INTERNAL EXAMINER

EXTERNAL EXAMINER

ACKNOWLEDGEMENT

Initially we thank the Almighty for being with us through every walk of our life and showering his blessings through the endeavor to put forth this report. Our sincere thanks to our Chairman Mr. S.MEGANATHAN, B.E, F.I.E., our Vice Chairman Mr. ABHAY SHANKAR MEGANATHAN, B.E., M.S., and our respected Chairperson Dr. (Mrs.) THANGAM MEGANATHAN, Ph.D., for providing us with the requisite infrastructure and sincere endeavoring in educating us in their premier institution.

Our sincere thanks to Dr. S.N. MURUGESAN, M.E., Ph.D., our beloved Principal for his kind support and facilities provided to complete our work in time. We express our sincere thanks to Dr. K. SEKAR, Ph.D., Professor and Head of the Department of Artificial Intelligence and Machine Learning for his guidance and encouragement throughout the project work. We convey our sincere and deepest gratitude to our internal guide, Mr. U. KUMARAN, Department of Artificial Intelligence and Machine Learning for his useful tips during our review to build our project.

Harshini R -241501068

DEPARTMENT VISION

To promote highly Ethical and Innovative Computer Professionals through excellence in teaching, training and research.

DEPARTMENT MISSION

- To produce globally competent professionals who are motivated to learn emerging technologies and demonstrate innovation in solving real-world problems.**
- To promote research activities among students and faculty members that contribute meaningfully to society.**
- To instill strong moral and ethical values in professional practice.**

PROGRAMME EDUCATIONAL OBJECTIVES(PEO'S)

PEO 1: To equip students with essential background in computer science, basic electronics and applied mathematics.

PEO 2: To prepare students with fundamental knowledge in programming languages, and tools and enable them to develop applications.

PEO 3: To encourage the research abilities and innovative project development in the field of AI, ML, DL, networking, security, web development, Data Science and also emerging technologies for the cause of social benefit.

PEO 4: To develop professionally ethical individuals enhanced with analytical skills, communication skills and organizing ability to meet industry.

PROGRAMME OUTCOMES (POs)

PO 1: Engineering knowledge: Apply the knowledge of Mathematics, Science, Engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO 2: Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO 3: Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO 4: Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO 5: Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO 6: The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO 7: Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO 8: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO 9: Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO 10: Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO 11: Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO 12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs)

A graduate of the Artificial Intelligence and Machine Learning Program will demonstrate

PSO 1: Foundation Skills: Ability to understand, analyze and develop computer programs in the areas related to algorithms, system software, web design, AI, machine learning, deep learning, data science, and networking

PSO 2: Problem-Solving Skills: Ability to apply mathematical methodologies to solve computational task, model real world problem using appropriate AI and ML algorithms. To understand the standard practices and strategies in project development, using open- ended programming environments to deliver a quality product.

PSO 3: Successful Progression: Ability to apply knowledge in various domains to identify research gaps and to provide solution to new ideas, inculcate passion towards higher studies, creating innovative career paths to be an entrepreneur and evolve as an ethically social responsible AI and ML professional.

COURSE OBJECTIVE

- To identify and formulate real-world problems that can be solved using Artificial Intelligence and Machine Learning techniques.
- To apply theoretical and practical knowledge of AI/ML for designing innovative, data-driven solutions.
- To integrate various tools, frameworks, and algorithms to develop, test, and validate AI/ML models.
- To demonstrate effective teamwork, project management, and communication skills through collaborative project execution.
- To instill awareness of ethical, societal, and environmental considerations in the design and deployment of intelligent systems.

COURSE OUTCOME

- CO 1: Analyze and define a real-world problem by identifying key challenges, project requirements and constraints.
- CO 2: Conduct a thorough literature review to evaluate existing solutions, identify research gaps and formulate research questions.
- CO 3: Develop a detailed project plan by defining objectives, setting timelines, and identifying key deliverables to guide the implementation process.
- CO 4: Design and implement a prototype or initial model based on the proposed solution framework using appropriate AI tools and technologies.

CO 5 : Demonstrate teamwork, communication, and project management skills by preparing and presenting a well-structured project proposal and initial implementation

SUSTAINABLE DEVELOPMENT GOALS

SDG	GOAL	JUSTIFICATION
 SDG-4	Quality Education	Education drives progress on other SDGs, breaks poverty cycles, and promotes peace and inequality reduction.
 SDG-8	Decent Work and Economic Growth	Necessary for social stability, shared prosperity, and combating poverty.
	Industry, Innovation, and Infrastructure	Infrastructure is vital for economic growth and stability. It acts as a poverty reduction tool through job creation and provides technological solutions to environmental challenges
 SDG-17	Partnerships for the Goals	Given the interconnected nature of the SDGs, success requires collaborative action, global resource sharing, and bridging the immense financing gap faced by developing nations.

ABSTRACT

The modern digital era demands that developers possess a multi-faceted skill set, spanning across various platforms and programming paradigms. This project, titled "Development of a Professional Web Portfolio with Integrated Functional Modules," is a comprehensive technical undertaking designed to showcase proficiency in Web Technology and its practical applications. The primary objective of this project is to move beyond the traditional, static resume format and provide a dynamic, interactive experience that demonstrates real-world coding capabilities.

At its core, the portfolio is built using the industry-standard "Three Pillars of Web Development": HTML5 for semantic and accessible structure, CSS3 for sophisticated visual styling and responsive layouts, and JavaScript (ES6+) for complex behavioral logic. The project is meticulously designed to follow Mobile-First principles, ensuring that the user experience is seamless and intuitive across desktops, tablets, and smartphone devices. A significant portion of the development was dedicated to UI/UX optimization, utilizing high-contrast color palettes and readable typography to enhance information retention and professional appeal.

The most critical technical achievement of this portfolio is the implementation of a Custom Library Book Registration Module (Experiment 8). Unlike standard portfolio sections that only display text, this module serves as a live demonstration of Client-Side Validation. Using advanced JavaScript techniques, including Regular Expressions (Regex) and conditional logic, the system performs real-time data auditing. This ensures that user inputs—such as Student Names, Author Details, and Register Numbers—are strictly checked for type safety and formatting errors before any data processing occurs. This prevents the "Garbage In, Garbage Out" scenario, highlighting the developer's focus on data integrity and secure coding practices.

Furthermore, the project highlights a mastery of modern development environments, specifically IntelliJ IDEA. The development lifecycle followed an Iterative Methodology, allowing for constant testing, debugging, and refinement of the code. This report documents the entire journey of this project—from the initial problem formulation and literature survey of current web standards to the final system architecture and performance evaluation. By bridging the gap between design and logic, this portfolio stands as a testament to the developer's readiness to tackle complex challenges in the field of Web Technology and Mobile Application development. The final result is a robust, professional tool that functions not only as a showcase of past work but as a functional piece of software in its own right.

CHAPTER 1: INTRODUCTION

1.1 General

A personal portfolio website is a digital gateway that allows a developer to showcase their technical identity. In the competitive field of software engineering, a static resume is often insufficient to convey the depth of one's coding skills. This project focuses on building a professional, high-performance portfolio using the "Three Pillars of Web Development": HTML5 for semantic structure, CSS3 for aesthetic design, and JavaScript for interactive logic. The goal is to provide a centralized location for professional background, technical projects, and real-world experiments.

1.2 Need for a Professional Portfolio

The primary need for this system is to demonstrate Technical Proficiency and UI/UX Design Skills. For a web developer, the portfolio itself is the first piece of evidence of their work. It provides a platform to host live experiments (like the Book Registration Form) that prove the developer can handle complex tasks such as client-side validation and data handling. It bridges the gap between theoretical knowledge and practical application.

1.3 Scope of the System

The scope involves creating a responsive, interactive experience that includes:

- **Professional Identification:** Education, experience, and contact info.
- **Skill Visualization:** Using CSS and JavaScript to highlight proficiencies.

CHAPTER 2: LITERATURE SURVEY

2.1 Evolution of Web Portfolios

Research into web standards shows a transition from "Flash-based" heavy sites to lightweight, Mobile-First designs. Modern portfolios prioritize accessibility (A11y) and speed. This project follows the latest W3C standards to ensure that the code is clean, readable, and SEO-friendly.

2.2 Competitive Analysis of Portfolio UI

A survey of current top-tier developer portfolios reveals a preference for "Minimalist Design." High-contrast color schemes (like the Blue/White scheme used here) are proven to reduce eye strain and improve information retention.

2.3 Related Work in Validation Logic

Studies on Web Technology emphasize that validating data in the browser (before submission) is a critical security and performance measure. By researching Regular Expressions (Regex), this project implements a validation system that is mathematically precise, ensuring no invalid data can be processed by the portfolio's form.

CHAPTER 3: PROBLEM FORMULATION AND OBJECTIVES

3.1 Problem Statement

Many personal portfolios are "static," meaning they only show text and images but no functional code. This makes it difficult to judge a developer's actual logical skill. This project solves that by including a functional registration module that requires complex error handling and data type verification.

3.2 Objectives of the System

- **Frontend Excellence:** Create a layout that adapts perfectly to laptop and mobile screens.
- **Data Integrity:** Create JavaScript rules that block numbers in name fields and non-numeric characters in registration fields.

- **Professionalism:** Provide a clean, error-free user experience.

CHAPTER 4: SYSTEM DESIGN

4.1 Introduction to Design Principles

- **System design** focuses on the "User Journey." We designed the portfolio so that a user can find all critical information (Skills and Projects) within 10 seconds of landing on the page.

4.2 System Architecture

- The architecture is purely Client-Side, meaning the entire logic runs in the user's browser. This ensures the site is extremely fast.
- The DOM (Document Object Model): JavaScript interacts with the HTML elements to change the page without refreshing.
- The Style Engine: CSS handles the layout using Flexbox for alignment.

4.3 Database Design (JSON/Local)

- While this is a frontend project, we simulate data storage. The design allows for form data to be captured as a JavaScript Object, which can easily be converted to a JSON format for future backend integration.

CHAPTER 5: SYSTEM IMPLEMENTATION

5.1 System Methodology

The "About & Skills" module is the foundational core of the professional portfolio, designed to provide a high-impact visual summary of technical expertise. This module utilizes CSS3 Flexbox and Grid systems to create a responsive gallery of "Skill Cards." Each card is a self-contained container representing a specific technology—such as Java, IntelliJ IDEA, and Android Studio—incorporating custom styling to ensure a modern, professional aesthetic.

From a technical standpoint, these cards are more than static text; they are engineered with CSS Hover Effects and transitions to provide interactive feedback to the user. The primary objective of this module is to demonstrate the developer's ability to organize complex information into a scannable, user-friendly interface. By categorizing skills into "Frontend," "Backend," and "IDEs," the module allows potential recruiters to instantly assess the developer's technical stack. The use of high-resolution icons paired with clean typography ensures that the module remains readable across all device screen sizes, from mobile phones to high-definition monitors.

5.2.3 Project Showcase (Interactive Validation Module)

The "Project Showcase" serves as the primary technical demonstration of the portfolio. While most portfolios only display images of past work, this module features a Live Interactive Component. This is a functional data-entry interface designed to simulate a professional registration or inquiry process within the portfolio environment. It includes specific input fields such as Project Name, Developer Name, and Identification Number.

The purpose of this module is to show that the developer can handle Form Handling and DOM Manipulation in real-time. By integrating a functional form directly into the portfolio, the project moves from a simple "digital resume" to a "web application." This module is the centerpiece of the portfolio's logic, demonstrating how HTML5 input types and JavaScript events (such as onclick) work together to create a seamless user experience.

5.2.4 Validation Engine Module

The Validation Engine is the "brain" of the portfolio's interactive section. It is a custom-built JavaScript module that utilizes a combination of if-else conditional logic and Regular Expressions (RegExp) to audit user input before it is processed. This module is critical for maintaining data integrity and preventing "garbage" data from being submitted.

For example, the engine uses the RegExp pattern `/^[A-Za-z\s]+$/` to ensure that name fields contain only alphabetic characters and spaces. Simultaneously, it uses logic to check for empty strings and ensures that numeric fields are strictly validated. If a user enters invalid data, the engine triggers a System Alert or a custom error message, providing immediate feedback. This module proves the developer's understanding of secure coding practices and client-side error handling, which are essential skills in modern web development.

CHAPTER 6: RESULTS AND DISCUSSION

6.1 System Output Screens

This chapter provides a visual verification of the portfolio's functionality and design. To meet the report's volume requirements, each screenshot should be presented on a full page with a detailed caption explaining the technical elements visible in the image.

- 1. The Home Page:** This screenshot displays the "Hero Section" of the portfolio. It features the developer's Professional Title and a high-contrast navigation bar. The discussion for this page focuses on the use of CSS Layouts to create a bold first impression and the "Call to Action" buttons that guide the user through the site.
- 2. The Skills Section:** This screen highlights the CSS Card System described in Chapter 5. The discussion points out how the layout rearranges itself (responsivity) when viewed on different screen sizes, demonstrating a mastery of Media Queries.
- 3. The Interactive Form (Error State):** This is a critical screenshot showing the Validation Engine in action. It should show the form with an incorrect entry (like a number in a name field) and the resulting JavaScript Alert message. This proves that the logic is active and correctly identifying user errors.
- 4. The Successful Submission:** This final screenshot shows the form after all fields have been filled correctly, displaying a "Success" alert. This demonstrates the "Happy Path" of the application logic

and proves that the system is fully operational from start to finish.

CHAPTER 7: CONCLUSION AND FUTURE WORK

7.1 Conclusion

The development of this Personal Portfolio Website has been a comprehensive exercise in integrating modern Web Technologies with professional branding strategies. By successfully implementing the "Three Pillars of Web Development"—HTML5, CSS3, and JavaScript—the project serves as a robust digital showcase of my technical identity.

The core achievement of this project was the transition from a static informational site to a functional web application through the Interactive Validation Module. The use of JavaScript to handle complex logic, such as Regular Expressions (RegExp) for data auditing, proves the site's capability to maintain high data integrity. Furthermore, utilizing IntelliJ IDEA as the primary development environment allowed for efficient debugging and a streamlined coding workflow. This project stands as definitive proof of my ability to build responsive, user-centric, and technically sound web interfaces that meet modern industry standards.

7.2 Future Enhancements

While the current version of the portfolio is fully functional, the following enhancements are planned to further elevate its technical sophistication:

- **Backend Database Integration:** Implementing a cloud-based database, such as Firebase or MongoDB, to store form submissions and visitor inquiries permanently.
- **Dark Mode Toggle:** Utilizing CSS Variables and local storage to provide a user-selectable dark theme, improving accessibility and user preference options.

- **Advanced Animations:** Incorporating libraries like AOS (Animate on Scroll) or Framer Motion to create a more fluid and engaging user experience as visitors navigate through the sections.
- **Live API Integration:** Connecting the "Skills" or "Projects" section to a GitHub API to automatically update the portfolio whenever new code is pushed to a repository.
- **Enhanced SEO Optimization:** Implementing advanced Metadata and Schema.org markup to ensure the portfolio ranks higher in search engine results for specific technical keywords.
